

Q3

TO OUR INVESTORS · THIRD QUARTER 2026

A flat market can still feel painful.

The S&P 500 has remained relatively resilient, but this stability hides considerable movement beneath the surface. Several widely owned market leaders — including Palantir, Microsoft and Micron — have at different points fallen roughly 20% to 40% from their recent highs. This does not necessarily mean money has left the market altogether. Instead, some of it has rotated away from previously crowded technology and AI winners into areas such as healthcare, financials, energy, materials and utilities.

PORTFOLIO RETURNS · NET, ANNUALISED (%)

	YTD	3Y P.A.	5Y P.A.	10Y P.A.
HSBC Life Aggressive	+16.31	+21.52	+9.27	+14.50
FWD Aggressive	+13.33	+20.39	+13.04	+14.41
Tokio Marine Aggressive	+9.51	+16.19	+5.92	+11.31
GWM Global Alpha	+11.39	+15.40	+9.66	+10.73

Returns in SGD, net of all fees, with dividends reinvested, as at 30 June 2026. Periods over one year are annualised. Past performance is no guarantee of future results.

KEY OBSERVATIONS

01

The index hid the damage.

The S&P 500 gained 0.6% over the past month. Over the same stretch the technology sector fell 5.4%, and semiconductors — close to a fifth of the index by weight — traded 20% below their high.

02

Money rotated. It did not leave.

Health care gained 7.4%, energy 6.4% and financials 4.5% over the same month. The equal-weight index now leads the cap-weighted index year to date, 11.8% against 10.7%.

03

Stocks stopped moving together.

Implied correlation sits near a twenty-year low. In a genuine decline, correlation spikes as investors sell everything at once. That is not what this is.

BENEATH A FLAT INDEX · DRAWDOWN FROM 52-WEEK HIGH, 22 JULY 2026 (%)

The index can be flat while your portfolio is in a bear market. An investor holding mainly last year’s biggest winners may experience a significant drawdown even though the headline index appears calm — the index sits 1.6% from its record while three of the most widely held names sit 24% to 36% below theirs. Conversely, a diversified investor may see weaker technology holdings partly offset by gains from other sectors and investment styles.

WHERE THE MONEY WENT · ONE MONTH TO 17 JULY 2026

Rotation, not withdrawal.

Recent market sessions have shown exactly this pattern: weakness in technology being offset by strength elsewhere, leaving the overall index relatively unchanged. The sectors now leading are the defensive and value-oriented areas that lagged for most of the year.

Markets do not always fall together. Sometimes they rotate — and a well-constructed portfolio is designed to participate in more than one source of return. The same pattern shows in factors: momentum has given back 8.5% against the index in a month, while value and small caps have gained on it.

HOW THE PORTFOLIO IS BUILT · AS AT 30 JUNE 2026

The core compounds. The tactical sleeve waits for its moment.

The tactical sleeve, as at 30 June 2026. Core and sleeve are shown for structure, not to scale — the strategic core is 80% of the portfolio; each tactical position is 10%. Tactical positions are deliberate, small and few — sized so that being wrong costs basis points, not years.

01

The core does the compounding.

Four-fifths of the portfolio stays fully invested in the strategic allocation, all the time. The tactical sleeve can add — it is never allowed to decide the outcome.

02

Healthcare is undervalued, not broken.

The sector has trailed the broader index for the better part of three years. Nothing is fundamentally wrong with it: healthcare spending rises over the long run, and demand holds up even when markets are turbulent. We are accumulating while it is cheap.

03

A patent cycle is winding up.

Expiring drugs force pharma to replace them — a wave of FDA approvals and fresh profitability tends to follow, with biotech firms as natural acquisition targets. If that run-up comes, we are positioned to benefit.

04

We do not force ideas.

Nothing else clears our bar today, so we sold our US small-cap positions and rotated the proceeds into MSCI World — participating broadly rather than manufacturing conviction, until a better opportunity arises.

THE RANDOMNESS OF GLOBAL EQUITY RETURNS · 2006–2025

The leadership rotates; the compounding does not care. Owning the broad market – all of it, all the time – is how the long-run return is actually collected. It is also why our tactical reserve sits in MSCI World while it waits.

In USD. MSCI country indices (net dividends). Developed markets exclude Israel (classified emerging prior to May 2010); emerging markets exclude Greece and Russia and countries with limited data.
